

This was my first working experience and I think it was **amazing**. I met great people that explained to me lots of **interesting things**. I **loved the atmosphere** that my colleagues created, so much. I liked seeing that a chemist is not only a person who reads a prescription and sells medicinal products, but a chemist has to **listen to the patient** and find the best treatments.

In this period, **I understood a lot of things** about **drugs** and about the **world of work**. I **enjoyed** in this experience because I found funny and nice doctors.
