

Partnership C.T. Gr. Moisil - Children's Palace Bistrita

For the study of the electronic subjects included in the curriculum for the classes majoring in electronics-electrics, a partnership program was initiated with the Children's Palace, the Electronics Circle. Thus the students with an interest in electronics could benefit from the workshop equipment from the Children's Palace and from the practical instruction offered by the teacher of electronics from this non-formal schooling institution. The Children's Palace is an education institution where specific instructive-educational activities take place, outside the school activity, and in which the knowledge is deepened and completed, skills are developed according to the children's vocation and option, the free time is organized through educational programs, etc. For a better harmonization of the theoretic knowledge taught in class at school with the practical activities taking place in the workshop, several cooperation courses were organized on the site edu.digitalservices.ro on the moodle platform. On this platform the teachers from C.T. Grigore Moisil and the teachers from the Children's Palace have posted various materials, unifying and harmonizing the activities from the two different locations.
